WHAT WENT WELL

- The team had a good time working together.

- The collaboration was great in our paired coding sessions.

- We shipped on time with no bugs reported.

- We had a clear objective for the project from the beginning, which helped to focus your efforts and stay on track.

- We did effective planning before starting the project, which helped you to break down the project into manageable tasks and set realistic timelines.

- We tried to maintain good communication within ourselves throughout the project, which helped to ensure that everyone was on the same page and that any issues were resolved quickly.

- We were able to come up with creative solutions to any problems that arose during the project, which helped to keep the project moving forward smoothly.

- We had a lot of work to do in a short amount of time, but we were able to stay organized and get it done. One thing we did well was prioritize brainstorming sessions to come up with user stories.

WHAT NEEDS IMPROVEMENT

- There were times when we weren't all on the same page, which caused delays and confusion.

- Some team members lacked domain knowledge, which made it challenging to make informed decisions and led to a few missteps along the way.

- The project involved working with new technologies and tools, which resulted in technical difficulties for some team members.

- Some important User stories were brainstormed at the end of the sprint.

- The feedback workflow between the team experienced trouble and had to wait a long time to review some topics.

NEXT STEPS

- We can also provide training or resources to address any knowledge gaps and ensure everyone is on the same page.

- Iteratively updating the status of the work assigned.

- To improve user engagement, we can conduct public surveys to understand people's needs and expectations.

- We can also use analytics tools on the surveys taken to track user behavior and identify areas that need improvement.
