What Went Well

Division of tasks was overall done well, with regards to Frontend and Backend.

Completing our work on time.

Using GitHub as our code collaboration tool and netlify as our cloud hosting provider.

Unit Testing and Integration Testing were done with a 100% passing score.

What Needs Improvement

Team Engagement was low.

Communication was occasionally lacking such as unanswered messages on Slack and WhatsApp

The retrospective should be noted by each team member within the sprint using stickies/ miro board.

Next Steps

Team members need to take more initiative.

Establish a better availability window for meetings.

Sprint-planned items need to be enforced to avoid mid-sprint scope changes.

We need to work on stories and tasks in a timely manner.
